

# L2000 Programmable Logic Controller

---

## Mixed I/O Modules

Mixed I/O modules have at least one of each type of I/O. These cards are efficient for smaller applications, since only one I/O card is required, rather than one of each type. These cards also allow the use of the compact L2000 packaging on a PLC with all types of I/O.

## High Density I/O Card

6 Analog Inputs  
2 Analog Outputs  
16 Digital Inputs  
8 Digital Outputs

The High Density I/O card is ideal for small pump stations with multiple pumps, and many other relatively small applications.

## Pump Card

2 Analog Inputs  
1 Analog Outputs  
4 Digital Inputs  
4 Digital Outputs

The Pump Card is ideal for small pump stations and lift stations with a single pump.

The Pump Card can also be used individually per pump.

For small to medium size applications, more than one mixed I/O card may be used in a card rack, to customize I/O count using the least number of cards.
