## PRESS RELEASE

*Tesco Controls Conducts Another Successful Open House Event.*

**Sacramento, September 12, 2008:** Tesco Controls, Inc. hosted an open house event featuring many technical workshops on Friday September 12<sup>th</sup>. Customers and business partners were invited to take part in the workshops and tour the Tesco Controls campus.

Nearly 500 guests attended this year's event which continues to grow year by year. Tesco Controls Employee-Owners, from wire technicians to company executives were on hand all day to meet and greet the guests as well as answer questions about our newest products and services such as the **L-1000G Smart I/O Gateway**, **Sump Termination Panel** and **EMASS** (Extended Maintenance and System Services).

Guests were invited to tour Tesco's operational 93,000 square foot plant, and get a firsthand look at the quality and value used in manufacturing Tesco's water and wastewater control panels, service pedestals and programmable logic controllers.

Guests were also invited to take part in highly technical workshops, focusing on varied subjects such as internet enabled SCADA applications, video alternatives for SCADA, programmable logic controllers and operator interface terminals, VFD hardware, harmonics and functionality, and web interfaces to mission critical systems and SCADA.

A catered lunch was served, and guests quickly took advantage of the opportunity to network with agencies, engineers and peers.

Those who could not attend the event are encouraged to call a Tesco Controls representative at 916-395-8800 for a personal tour of the Tesco Controls campus.

**FOR IMMEDIATE RELEASE**

**MORE**

### **About Tesco Controls**

Headquartered in Sacramento, CA, since 1972, Tesco Controls, Inc. is America's leading water and wastewater system integrator and control system manufacturer.

Tesco Controls' SCADA systems allow municipal water/wastewater and irrigation districts to monitor and control treatment plants, water distribution systems, and wastewater collection systems.

Our SCADA system installations, now over 300 systems nationwide, are in operation throughout California, as well as in Washington, Nevada, New Mexico, Colorado, Louisiana, Alabama, and Florida. These systems consist of multiple Programmable Logic Controllers (PLCs) that communicate between central sites and various remote sites over telephone lines, fiber optics, radio links, or dedicated cable television. Our redundant, open architecture SCADA software and hardware systems feature multi-user, multi-tasking, real time graphic user interfaces with report capability, designed specifically around the demanding needs of the water/wastewater industry.

To date, our installed base of products and control systems is in excess of \$300 million.
