PRESS RELEASE

Tesco Controls Inc. completes 40,000th project.

Sacramento, California - July 2011: Tesco Controls Inc. is proud to announce that we recently completed our 40,000th project. Since 1972, these projects have included a multitude of Transportation or Water/Wastewater electrical control system applications ranging from:

- Electrical service pedestals that provides utility power and/or battery backup power to the signal controllers at traffic intersections.
- Lighting controls for roadways, tunnels, parks and sports facilities.
- Sewer lift stations that pump sewage from residential areas to treatment plants.
- Booster and storage stations that maintain water pressure.
- Multi-million dollar control and communications systems that monitor and control:
 - Collection, treatment and disposal of sewage.
 - Storage and distribution of safe drinking water to homes and businesses.
- Professional engineering services and support contracts direct with federal, state, city and county agencies.

On behalf of all Tesco employee-owners, I would like to personally extend my gratitude to all Tesco customers, vendors and partners who have made this amazing accomplishment possible.

Best Regards,

Andy Brown
